

Langley Research Center Safety Alert

SA-08-91

Date: May 2, 1991

TO: All Facility Safety Heads
All Facility Coordinators
All Contractor Safety Representatives

FROM: 429/Chief, Systems Safety, Quality and Reliability
Division (SSQRD)

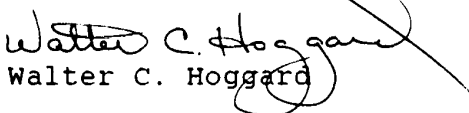

SUBJECT: Reorganization of the Safety Engineering Branch,
SSQRD

The Safety Engineering Branch, previously composed of two sections, has been renamed the Risk Management Branch with three Sections.

The Safety and Environmental Management Section has been divided into: the Environmental Engineering Section (EES) and the Safety Management Section (SMS). Mr. John W. Lee will head the EES, which will handle all Center environmental efforts including compliance with clean water permits, the PCB program, hazardous waste management and disposal, noise and clean air standards. Mr. Charles B. Zeitman will head the SMS, which will handle all Safety and Occupational Health activities. The three major elements of this section are: Fire and Life Safety; Institutional Safety which includes annual facility audits, construction, and oversight of support contractor safety programs; and Occupational Health, which includes chemical and radiation, asbestos, confined space entry and hearing conservation activities.

The Facility Systems Safety Section has been redesignated the Facility Assurance Section (FAS), a name change only. This organization is responsible for facility assurance, i.e. all SR&Q disciplines. Mr. V. William Wessel is the Acting Head of FAS.

This reorganization permits support of the Center's mission while making efficient use of the resources available. A new organization chart is supplied on the reverse side of this release. Your continued support of these vital Center functions is appreciated.

Walter C. Hoggard

RISK MANAGEMENT BRANCH
